

The Highbridge Hill Elementary Flip Classroom Committee finally received the last of their ordered items and are well on their way to start "Flipping" their classes. We experienced some difficulties with having the wrong items shipped, the 7" Asus Memopad tablets, instead of the 10.1" Asus Memopad tablets. However, the dealer shipped the correct items overnight.

We celebrated by having the **"Opening Party"** after school on February 10th. As you can see the devices and other supporting items were separated and divided into piles for everyone on the team. When everyone arrival, each team member received their tablet, case, stylus/pen, SD card, recordable DVDs, and DVD covers. As the Education Technology Integration Specialist, I, Natalie Breen, preformed a mini-training for all the members to get them started and to connect their Google accounts.

As a team, we noticed some slight differences between the Asus Memopad and the Google Nexus tablet, that we are used too. However, the user platform is nearly identical, which makes it equally as user friendly. We all agreed that the larger screen, front and rear facing cameras, SD slot, Android platform, etc. were fantastic and that we made the right choice in devices. As you can see, even our IT support, Jesse Ardine, arrive to take a look and give it a whirl.

The next step is applying the "Flip" practices and theories. Stay tune to see our mapping and schedule. Including, how the Computer Integration Specialist preformed her first flip using Mathematics and the Google Sketchup software.
